

AHMED SAEED AL YAZID

Artificial Intelligence | Machine Learning | Data Science | Computer Vision

Makkah, Saudi Arabia | ahmedalyzeed@gmail.com | github.com/Ahmed-ALYazid

Portfolio: ahmed-portfolio-2e0.pages.dev

PROFILE

Artificial Intelligence graduate from Umm Al-Qura University (GPA 3.37/4.00) with experience in controlled computer-vision research, applied machine-learning projects, and a production Arabic educational platform. The linked portfolio includes three browser-based demonstrations built from the documented coursework data and image classes.

EDUCATION

B.Sc. Artificial Intelligence | Umm Al-Qura University, College of Computing | 2022-2026 | GPA 3.37/4.00

SELECTED WORK

Educational Supervision Platform | Production platform, 2026

- Built and deployed Arabic RTL workflows for supervision visits, structured records, dashboards, reporting, access control, and document exports.
- Cloudflare Pages and Workers, Cloudflare D1, Better Auth, and Backblaze B2. almarefah-supervision.pages.dev

Comparative Deep-Learning Research for Glaucoma Classification | Team graduation project, 2025-2026

- Controlled comparison of six conditions on 4,828 synthetic retinal fundus images with stratified 3-fold cross-validation.
- ViT-Small and ResNet-18 feature extraction and fine-tuning; KAN-Transformer and MLP-Transformer trained from scratch. Best reported ResNet18-FT: accuracy 0.963, AUC-ROC 0.996.
- Python and PyTorch; calibration, bootstrap confidence intervals, peripheral-occlusion diagnostics, and Attention Rollout.

Interactive academic machine-learning projects

- Animal image classification across nine documented classes. The portfolio retraining used 827 readable coursework images and achieved 88.9% held-out accuracy with local browser inference.
- Diamond price regression from length, width, and depth. Reproduced held-out results: MAE \$241, RMSE \$329, and R-squared 0.904.
- Obesity coursework model audit and a documented decision-tree retraining on the same five inputs and 2,086 records; 89.6% accuracy on a 626-record holdout. Educational use only.

TECHNICAL SKILLS

Languages & data: Python, SQL, Java, Pandas, NumPy, Matplotlib

Machine learning: PyTorch, TensorFlow/Keras, scikit-learn, CNNs, Vision Transformers, ResNet, transfer learning

Evaluation: cross-validation, AUC-ROC, calibration, bootstrap confidence intervals, explainability

Cloud & delivery: Git/GitHub, Cloudflare Pages, Workers, D1, Better Auth, Backblaze B2

CERTIFICATIONS & LANGUAGES

Introduction to Artificial Intelligence and Digital Skills in Artificial Intelligence (Edraak, 2022) | Arabic: native | English: professional working proficiency
